

Environmental Policy

At SHAPE we believe the property industry should be leading the way to create a more environmentally sustainable Australia. We will work with our clients to incorporate environmental and sustainable initiatives on the projects we deliver for them. Through our commitment to continually improve our environmental performance, we aim to become a truly sustainable business and believe we can influence our industry to a greater level of environmental management, impact prevention and sustainability.

To achieve this aim we will:

- Create a culture that integrates environmental principles into SHAPE's strategic decision making processes,
- Promote the identification of environmental opportunities, needs and expectations of workers and other relevant interested parties,
- Work with clients, architects, designers and consultants to promote sustainability as an integral part of each project,
- Encourage better environmental practices among the suppliers and subcontractors we engage,
- Establish measurable objectives and targets that address our environmental impact through our yearly Strategic Planning Programme,
- Minimise the generation of waste and the use of energy, water and resources by our business activities,
- Prevent pollution from SHAPE operations by identifying and managing activities that have the potential to pollute the environment, and
- Ensure continual improvement to the Environmental, Health, Safety and Quality Management System through quarterly senior management review meetings,
- Communicate the expectation that our people stop work if our activities cannot be completed without proper regard for the environment.

In addition to the above, we will meet all legal requirements relevant to our business operations and implement and maintain our environmental management system in accordance with ISO 14001.
